

We are Owkin

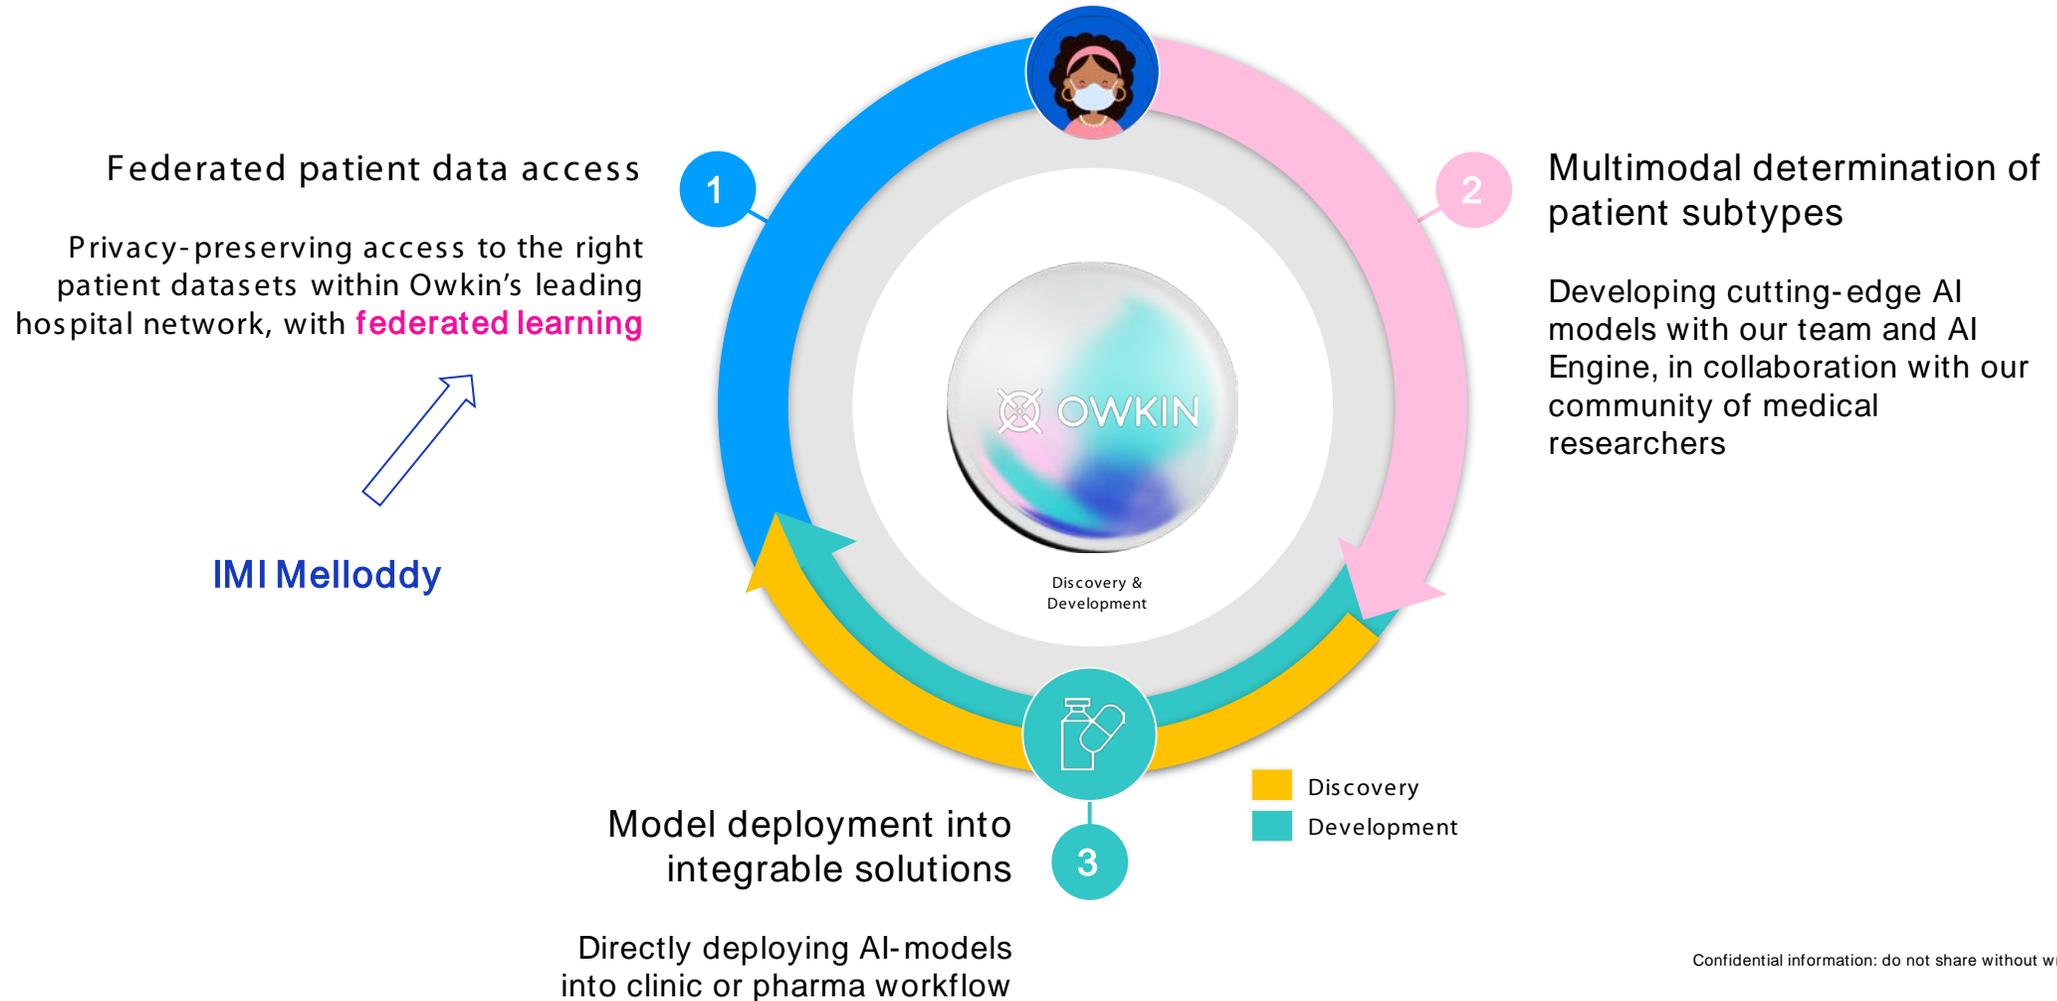

↳ The first AI biotech platform company
powered by a federated data network

29 March 2022

We offer an end-to-end AI powered precision medicine solution: from patient data to patient outcomes

What is Federated learning

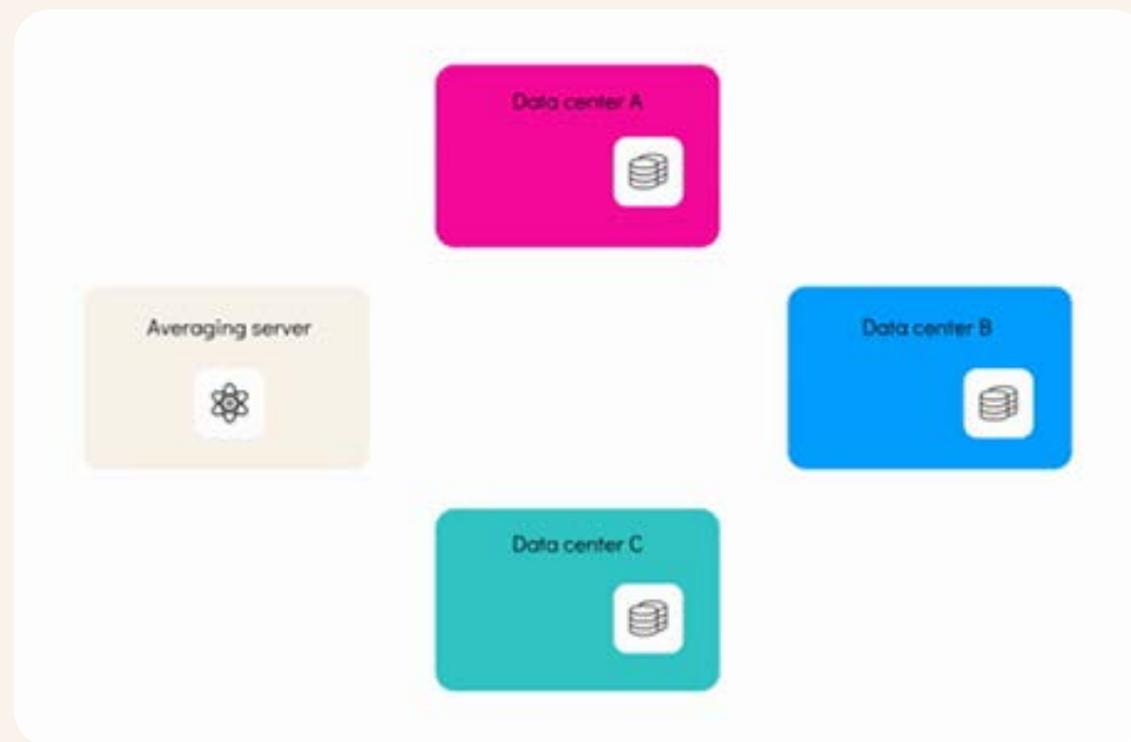

Benefits

Performance: train state of the art ML models on distributed datasets

Privacy: keep data safe and secure as they never move

Melloddy IMI project - (June 2019-May 2022)

Federated Learning for drug discovery

Goal: train common predictive models across **10 pharmaceutical companies** to improve their predictive power.

Constraint: ensure **privacy** and security of all datasets involved.

This project has received funding from the Innovative Medicines Initiative 2 Joint Undertaking under grant agreement N° 831472. This Joint Undertaking receives support from the European Union's Horizon 2020 research and innovation programme and EFPIA

Impact of Melloddy on Owkin

Proof point 1/3

Federated Learning is a new concept.

It needs validation in real life.

Impacts:

Technology proof point

Scientific proof point

MELLODDY Meets Year One Objective

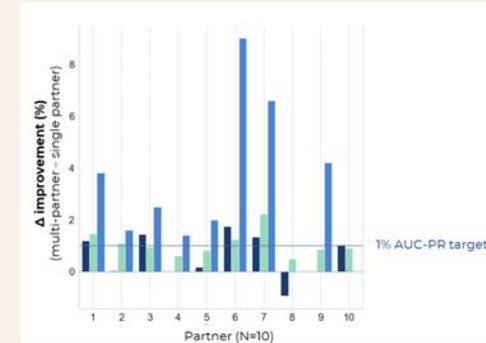

✓ World's first Federated Learning model for drug discovery trained at scale.

MELLODDY

MELLODDY Meets Year Two Objective

✓ Federated learning in drug discovery improves model performance

MELLODDY

Year three is ongoing

Acculturation 2/3

Startup, academic and pharma cultures are very different.
Working together is a skill.

Impacts:

Efficient collaboration

Grow network of (potential) customers

Industrialisation 3/3

Bringing Federated Learning to this scale had never been done before.

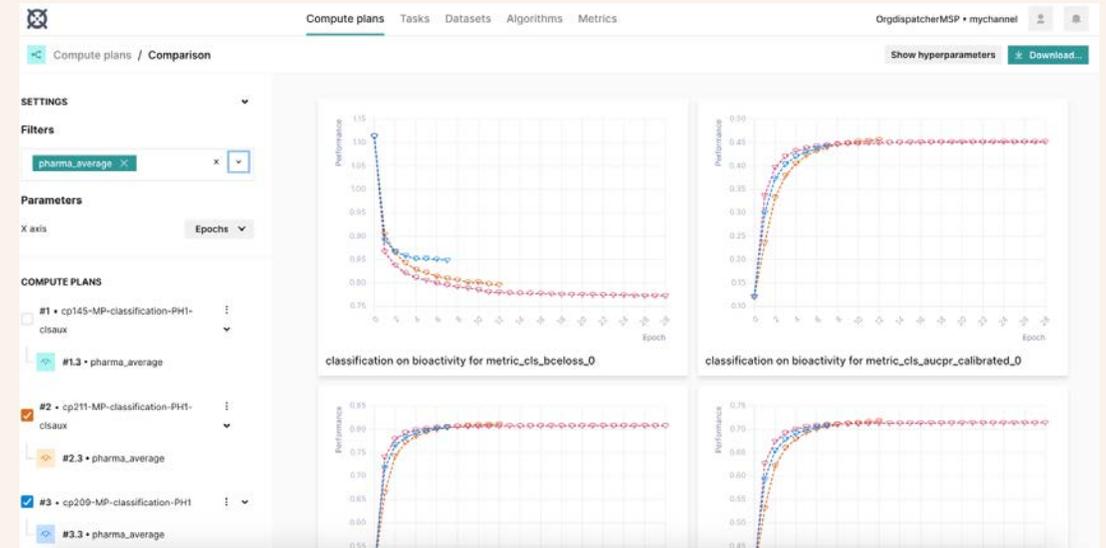

We had to prove our mettle.

Impacts:

Large scale implementation

Delivery oriented Organisation

Privacy / Security audits

Overall, Melloddy
helped us scale first
