

Outcome of the IHI JU Science and Innovation Panel on ideas submitted for potential IHI topics

Reference number of the idea: N° TI_001282

Revolutionary Cancer Theory & Quantum Medicine: A Translational Approach for iHi's Innovation

Overall opinion

The proposed idea is not sufficiently describing how a quantum approach could help address cancer cell-related challenges. There is not sufficient information on the envisaged approach: would it consist in repairing information dysfunction within cancer cells and reprogram cancer cells to be healthy again or to control cancer cells growth and proliferation? Because there is no mention of available preliminary data or a proof of concept, the SIP questions the overall feasibility of translating such idea into a call topic that would fit within IHI and that would be of relevance for potential industrial partners.

At present, the currently formulated idea is not yet mature for obtaining a favourable opinion from the SIP.
